

Lujia Chen

Address: Fort Lee, NJ 07024 || chenlujia549@gmail.com || Cell Phone: (405) 881 9299

EDUCATIONAL EXPERIENCE

Undergraduate: University of Richmond

Bachelor of Arts in Mathematics, Data Science (Outstanding Student Award)

Richmond, VA

2021.08 - 2025.05

Master: Columbia University

Master of Biostatistics

New York City

2025.08 - Now

Programming Languages: Python, R, SQL, Java, SAS

Libraries: Pandas, NumPy, Scikit-learn, Statsmodels, Matplotlib, Seaborn, Plotly

Tools: Streamlit, Git, Jupyter Notebook, Excel

WORK EXPERIENCE

RedNote (Xiaohongshu) Business Analysis and Operations Internship

2024.05 - 2024.08

- Assisted maternal and infant merchants to establish connections with popular buyers, reported data to the team daily, contacted merchants weekly, provided data support, and helped merchants improve their operating strategies
- Researched market trends, write reports, and provided data support and market insights to merchants
- Cleaned and combined live broadcast data by using Python, analyzed live broadcast data by using recent one-year data, including cover click-through rate, and dwell time, and calculated DGMV correlation
- Successfully helped 20+ brands optimize marketing strategies and increase sales

MA Coalition for Cannabis Worker and Consumer Safety

2026.05 - now

- Analyzed public health and regulatory datasets (OSHA, FOIA, cannabis testing) to identify safety and contamination trends.
- Cleaned and summarized real-world data using Excel and R to support public health surveillance.
- Developed reports and visualizations to summarize analytical findings.
- Conducted literature reviews to support evidence-based public health research.

Chinese Teaching Assistant Prof: Jessica Chan, University of Richmond

2022.01 - 2022.06

- Teaching assistant for advanced Chinese courses at the University of Richmond
- Assisted professors to complete lectures
- Provided Q&A service for freshmen, sophomores, juniors, and senior

PROJECTS

A/B Testing for E-commerce Conversion Optimization

2026.06 - 2026.08

- Designed and analyzed an end-to-end A/B testing experiment to evaluate the impact of a redesigned e-commerce landing page on conversion rate.
- Performed exploratory data analysis, statistical hypothesis testing (two-sample Z-test), confidence interval estimation, and power analysis.
- Visualized experiment outcomes and interpreted statistical significance to support data-driven product decisions.
- Delivered business recommendations by balancing statistical significance with practical business impact.

Lending Club Loan Default Prediction

2024.05 - 2024.06

- Developed an end-to-end credit risk prediction model using LendingClub loan data to classify borrowers as Fully Paid or Charged Off.
- Engineered numerical and categorical features through interpolation, label encoding, feature scaling, and correlation-based feature selection.
- Evaluated Logistic Regression, Random Forest, KNN, SVM, and MLP Neural Network, selecting the best-performing model through 5-fold cross-validation.
- Interpreted model behavior with feature importance ranking and L1 regularization to improve model explainability and support credit risk analysis.

Time Series Forecasting

2024.03 - 2024.05

- Developed forecasting models for climate and financial time series using SARIMA to capture trend and temporal dependencies.
- Conducted data preprocessing, seasonal decomposition, stationarity testing (ADF), and feature analysis to prepare non-stationary time series for modeling.
- Applied ACF/PACF analysis for parameter selection and generated future forecasts with confidence intervals.
- Evaluated forecasting performance using Mean Squared Error and visualized prediction accuracy.

Data Visualization in Malaysia's COVID-19 pandemic

2024.02 - 2024.03

- Searched API data from the Internet and imported it into R for operation and analysis
- Data cleaning and screening of 1150 data and 50 variables
- Selected the final data (daily and total number of infections, recoveries, and Pfizer vaccine injections) for visualization and summary, and exported to CSV table
